GOALS**

A sustainable MFA: why?

Walk our Talk

Mission Sustainable focuses on the themes climate, circular economy and social conditions in supply chains

- 1** Operational management and procurement climate neutral by 2030
- 2** 12 circular pilot projects in 2022 and 2023
In 2024 a strategy on circular economy will be formulated based on lessons learned
- 3** Minimizing risks of violations of human rights and International Labour Conditions in supply chains

Contributing principally to Sustainable Development Goals:

Sustainability report 2022

Walk our Talk

Priorities for 2023

Further shaping sustainable travel policy

Exploring opportunities for improving sustainability in policy implementation

Rolling out circular pilot projects and analysing lessons learned

Improving sustainability data

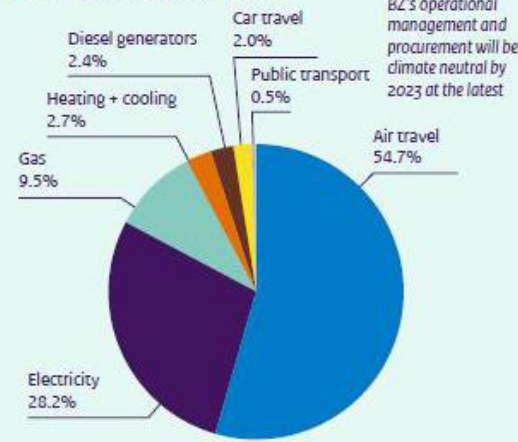

Continuing to take stock and ensure payment of a living wage when procuring facilities services

Contributing principally to Sustainable Development Goals:

Objective 1: Climate neutrality

BZ's carbon footprint in 2022

Objective 3: Supply chain responsibility

We actively seek to minimise the risks of breaches of human rights and international labour standards

BZ runs the greatest supply chain risks in housing projects, facilities services contracts and IT hardware contracts

Objective 2: Circular economy

We are launching 12 pilot projects to determine our contribution to a circular economy

The first of these pilot projects launched in 2022 was a working group on circular events

In 2024 we will devise a strategy for incorporating circular economy in operational management

Sustainable and social organisational culture

Using various tactics we will continue to promote a sustainable and social organisational culture:

Inspiring

Connecting

Informing

Instructing
